

DIY Metal Can Planter

Materials Needed:

- Metal can
- Small plant or succulent
- Soil
- Small stones or pebbles (optional for drainage)
- Drill (optional)

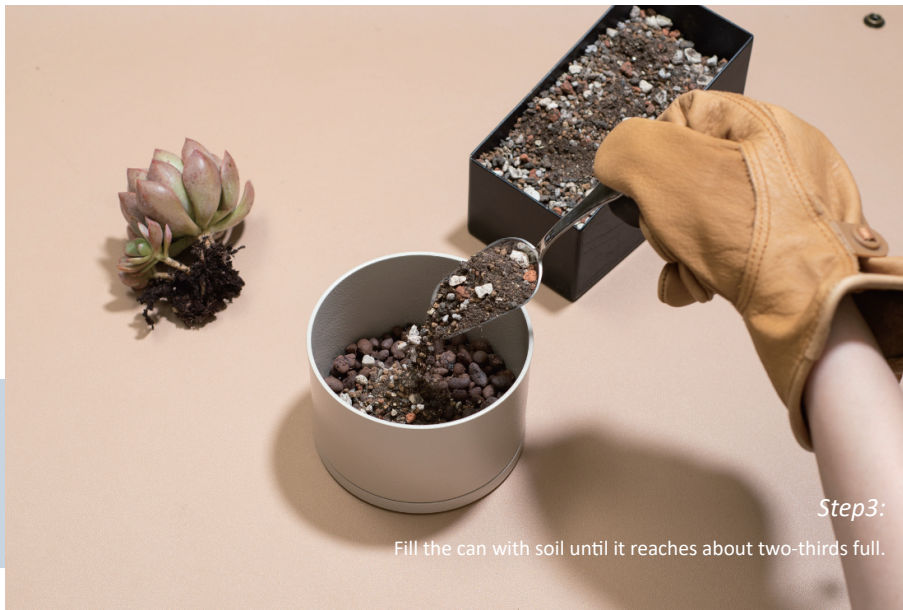

Step1:

Clean the can thoroughly and let it dry.

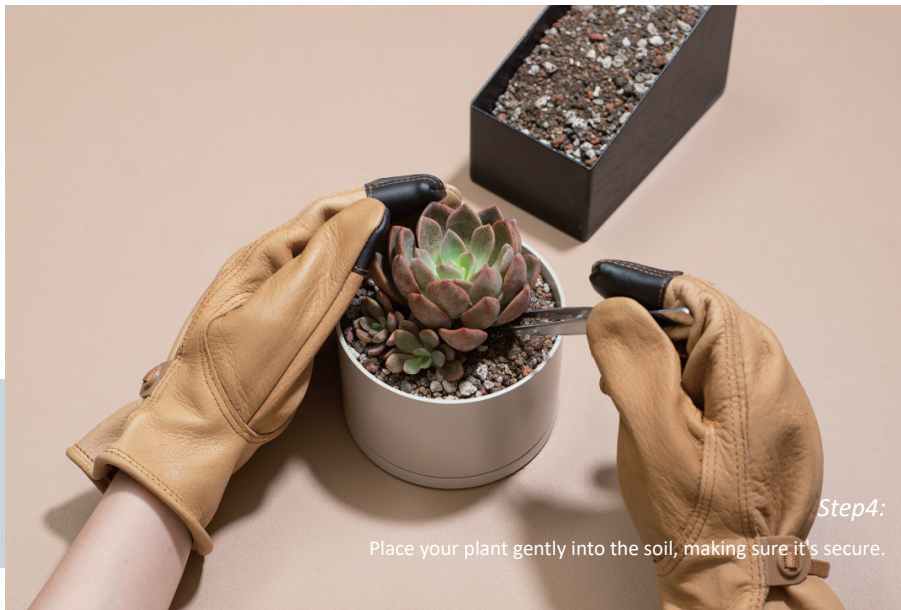

Step2:

Drill small drainage holes at the bottom of the can. If you prefer not to drill, add a layer of small stones or pebbles to the bottom for better drainage.

Step3:

Fill the can with soil until it reaches about two-thirds full.

Step4:

Place your plant gently into the soil, making sure it's secure.

Step5:

Water lightly and place the planter in a sunny spot.

Enjoy your new eco-friendly planter!
